

# JTC Import Export Pty Ltd

Chemwatch: 5390-40 Version No: 2.1.1.1 Safety Data Sheet according to WHS and ADG requirements Chemwatch Hazard Alert Code: 3

Issue Date: 04/02/2020 Print Date: 13/02/2020 L.GHS.AUS.EN

# SECTION 1 IDENTIFICATION OF THE SUBSTANCE / MIXTURE AND OF THE COMPANY / UNDERTAKING

#### **Product Identifier**

| Product name  | XtraCare Nail Polish Remover                       |
|---|--|
| Synonyms  | Product code: 43052                                |
| Proper shipping name  | FLAMMABLE LIQUID, N.O.S. (contains methyl acetate) |
| Other means of identification   | Not Available                                      |
| Relevant identified uses of the substance or mixture and uses advised against |  |

Relevant identified uses Nail polish remover.

# Details of the supplier of the safety data sheet

| Registered company name | JTC Import Export Pty Ltd                              |  |
|-------------------------|--|--|
| Address                 | 98 South Park Drive Dandenong South VIC 3175 Australia |  |
| Telephone               | 1 3 9532 5100  |  |
| Fax                     | +61 3 9532 6102  |  |
| Website                 | http://www.jtcimportexport.com.au                      |  |
| Email                   | sales@jtcimportexport.com.au                           |  |

### Emergency telephone number

| Association / Organisation        | JTC Import Export Pty Ltd  |  |
|-----------------------------------|--|--|
| Emergency telephone<br>numbers    | +61 3 9532 5100 (Mon-Thurs 8.30am to 5.30pm; Friday 8.30am to 3pm) |  |
| Other emergency telephone numbers | Not Available  |  |

### SECTION 2 HAZARDS IDENTIFICATION

### Classification of the substance or mixture

Hazard pictogram(s)

| Poisons Schedule   | Not Applicable  |  |
|--------------------|---|--|
| Classification [1] | Flammable Liquid Category 2, Eye Irritation Category 2A, Specific target organ toxicity - single exposure Category 3 (narcotic effects) |  |
| Legend:            | 1. Classified by Chernwatch; 2. Classification drawn from HCIS; 3. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI    |  |

Label elements

|  | ( and |  |  |
|--|-------|--|--|
|--|-------|--|--|

DANGER

SIGNAL WORD

| H225   | Highly flammable liquid and vapour.                    |  |
|--------|--|--|
| H319   | Causes serious eye irritation.                         |  |
| H336   | May cause drowsiness or dizziness.                     |  |
| AUH066 | Repeated exposure may cause skin dryness and cracking. |  |
|        |  |  |

### Precautionary statement(s) Prevention

| P210 | Keep away from heat/sparks/open flames/hot surfaces No smoking. |
|------|---|
| P271 | Use only outdoors or in a well-ventilated area.                 |
| P240 | Ground/bond container and receiving equipment.                  |

| P241 | Use explosion-proof electrical/ventilating/lighting/intrinsically safe equipment. |  |
|------|---|--|
| P242 | P242 Use only non-sparking tools.   |  |
| P243 | P243 Take precautionary measures against static discharge.                        |  |
| P261 | P261 Avoid breathing mist/vapours/spray.  |  |
| P280 | Wear protective gloves/protective clothing/eye protection/face protection.        |  |

### Precautionary statement(s) Response

| • • • • • •    |  |  |
|----------------|--|--|
| P370+P378      | In case of fire: Use alcohol resistant foam or normal protein foam for extinction.   |  |
| P305+P351+P338 | IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. |  |
| P312           | Call a POISON CENTER or doctor/physician if you feel unwell.   |  |
| P337+P313      | If eye irritation persists: Get medical advice/attention.  |  |
| P303+P361+P353 | IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower.                       |  |
| P304+P340      | IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing.                                 |  |

### Precautionary statement(s) Storage

| P403+P235 | Store in a well-ventilated place. Keep cool. |
|-----------|--|
| P405      | Store locked up.                             |

#### Precautionary statement(s) Disposal

P501 Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation

# SECTION 3 COMPOSITION / INFORMATION ON INGREDIENTS

### Substances

See section below for composition of Mixtures

### Mixtures

| CAS No   | %[weight] | Name                              |
|----------|-----------|-----------------------------------|
| 79-20-9  | 40        | methyl acetate                    |
| 112-34-5 | 20        | diethylene glycol monobutyl ether |
| 56-81-5  | 1         | glycerol                          |

# **SECTION 4 FIRST AID MEASURES**

### Description of first aid measures

| Eye Contact  | <ul> <li>If this product comes in contact with the eyes:</li> <li>Wash out immediately with fresh running water.</li> <li>Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids.</li> <li>Seek medical attention without delay; if pain persists or recurs seek medical attention.</li> <li>Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.</li> </ul>                                  |
|--------------|--|
| Skin Contact | <ul> <li>If skin or hair contact occurs:</li> <li>Immediately flush body and clothes with large amounts of water, using safety shower if available.</li> <li>Quickly remove all contaminated clothing, including footwear.</li> <li>Wash skin and hair with running water. Continue flushing with water until advised to stop by the Poisons Information Centre.</li> <li>Transport to hospital, or doctor.</li> </ul>   |
| Inhalation   | <ul> <li>If fumes or combustion products are inhaled remove from contaminated area.</li> <li>Lay patient down. Keep warm and rested.</li> <li>Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures.</li> <li>Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary.</li> <li>Transport to hospital, or doctor, without delay.</li> </ul> |
| Ingestion    | <ul> <li>If swallowed do NOT induce vomiting.</li> <li>If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration.</li> <li>Observe the patient carefully.</li> <li>Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious.</li> <li>Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink.</li> <li>Seek medical advice.</li> </ul>    |

Indication of any immediate medical attention and special treatment needed

Treat symptomatically.

# SECTION 5 FIREFIGHTING MEASURES

### Extinguishing media

- Alcohol stable foam.
- Dry chemical powder.
- BCF (where regulations permit).
- Carbon dioxide.
- Water spray or fog Large fires only.

### Do not use water jets.

### Special hazards arising from the substrate or mixture

| Fire Incompatibility  | Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may result   |
|-----------------------|--|
| vice for firefighters |  |
| Fire Fighting         | <ul> <li>Alert Fire Brigade and tell them location and nature of hazard.</li> <li>May be violently or explosively reactive.</li> <li>Wear breathing apparatus plus protective gloves in the event of a fire.</li> <li>Prevent, by any means available, spillage from entering drains or water course.</li> <li>Consider evacuation (or protect in place).</li> <li>Fight fire from a safe distance, with adequate cover.</li> <li>If safe, switch off electrical equipment until vapour fire hazard removed.</li> <li>Use water delivered as a fine spray to control the fire and cool adjacent area.</li> <li>Avoid spraying water onto liquid pools.</li> <li>Do not approach containers suspected to be hot.</li> <li>Cool fire exposed containers with water spray from a protected location.</li> <li>If safe to do so, remove containers from path of fire.</li> </ul> |
| Fire/Explosion Hazard | <ul> <li>Liquid and vapour are highly flammable.</li> <li>Severe fire hazard when exposed to heat, flame and/or oxidisers.</li> <li>Vapour may travel a considerable distance to source of ignition.</li> <li>Heating may cause expansion or decomposition leading to violent rupture of containers.</li> <li>On combustion, may emit toxic fumes of carbon monoxide (CO).</li> <li>Combustion products include:</li> <li>carbon dioxide (CO2)</li> <li>other pyrolysis products typical of burning organic material.</li> <li>Contains low boiling substance: Closed containers may rupture due to pressure buildup under fire conditions.</li> </ul>   |
| HAZCHEM               | •3YE   |

# SECTION 6 ACCIDENTAL RELEASE MEASURES

# Personal precautions, protective equipment and emergency procedures

See section 8

# **Environmental precautions**

See section 12

### Methods and material for containment and cleaning up

| Minor Spills | <ul> <li>Remove all ignition sources.</li> <li>Clean up all spills immediately.</li> <li>Avoid breathing vapours and contact with skin and eyes.</li> <li>Control personal contact with the substance, by using protective equipment.</li> <li>Contain and absorb small quantities with vermiculite or other absorbent material.</li> <li>Wipe up.</li> <li>Collect residues in a flammable waste container.</li> </ul>  |
|--------------|--|
| Major Spills | <ul> <li>Clear area of personnel and move upwind.</li> <li>Alert Fire Brigade and tell them location and nature of hazard.</li> <li>May be violently or explosively reactive.</li> <li>Wear breathing apparatus plus protective gloves.</li> <li>Prevent, by any means available, spillage from entering drains or water course.</li> <li>Consider evacuation (or protect in place).</li> <li>No smoking, naked lights or ignition sources.</li> <li>Increase ventilation.</li> <li>Stop leak if safe to do so.</li> <li>Water spray or fog may be used to disperse /absorb vapour.</li> <li>Contain spill with sand, earth or vermiculite.</li> <li>Use only spark-free shovels and explosion proof equipment.</li> <li>Collect recoverable product into labelled drums for disposal.</li> <li>Wash area and prevent runoff into drains.</li> <li>If contamination of drains or waterways occurs, advise emergency services.</li> </ul> |

Personal Protective Equipment advice is contained in Section 8 of the SDS.

### SECTION 7 HANDLING AND STORAGE

| Safe handling | <ul> <li>Containers, even those that have been emptied, may contain explosive vapours.</li> <li>Do NOT cut, drill, grind, weld or perform similar operations on or near containers.</li> <li>Contains low boiling substance:</li> <li>Storage in sealed containers may result in pressure buildup causing violent rupture of containers not rated appropriately.</li> <li>Check for bulging containers.</li> <li>Vent periodically</li> <li>Always release caps or seals slowly to ensure slow dissipation of vapours</li> <li>DO NOT allow clothing wet with material to stay in contact with skin</li> <li>Avoid all personal contact, including inhalation.</li> <li>Wear protective clothing when risk of exposure occurs.</li> <li>Use in a well-ventilated area.</li> <li>Prevent concentration in hollows and sumps.</li> </ul> |  |
|---------------|--|--|
|---------------|--|--|

|                               | <ul> <li>DO NOT enter confined spaces until atmosphere has been checked.</li> <li>Avoid smoking, naked lights, heat or ignition sources.</li> </ul>  |
|-------------------------------|--|
|                               | <ul> <li>When handling, DO NOT eat, drink or smoke.</li> <li>Vapour may ignite on pumping or pouring due to static electricity.</li> <li>DO NOT use plastic buckets.</li> </ul>  |
|                               | <ul> <li>Earth and secure metal containers when dispensing or pouring product.</li> <li>Use spark-free tools when handling.</li> <li>Avoid contact with incompatible materials.</li> </ul>   |
|                               | <ul> <li>Keep containers securely sealed.</li> <li>Avoid physical damage to containers.</li> <li>Always wash hands with soap and water after handling.</li> </ul>  |
|                               | <ul> <li>Work clothes should be laundered separately.</li> <li>Use good occupational work practice.</li> <li>Observe manufacturer's storage and handling recommendations contained within this SDS.</li> <li>Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions.</li> </ul>   |
| Other information             | <ul> <li>Store in original containers in approved flame-proof area.</li> <li>No smoking, naked lights, heat or ignition sources.</li> <li>DO NOT store in pits, depressions, basements or areas where vapours may be trapped.</li> <li>Keep containers securely sealed.</li> <li>Store away from incompatible materials in a cool, dry well ventilated area.</li> </ul>  |
|                               | <ul> <li>Protect containers against physical damage and check regularly for leaks.</li> <li>Observe manufacturer's storage and handling recommendations contained within this SDS.</li> </ul>  |
| nditions for safe storage, in | cluding any incompatibilities  |
|                               | <ul> <li>Packing as supplied by manufacturer.</li> <li>Plastic containers may only be used if approved for flammable liquid.</li> <li>Check that containers are clearly labelled and free from leaks.</li> </ul>   |
| Suitable container            | <ul> <li>For low viscosity materials (i) : Drums and jerry cans must be of the non-removable head type. (ii) : Where a can is to be used as an inner package, the can must have a screwed enclosure.</li> <li>For materials with a viscosity of at least 2680 cSt. (23 deg. C)</li> <li>For manufactured product having a viscosity of at least 250 cSt. (23 deg. C)</li> </ul>  |
| Cutable Container             | <ul> <li>Non-indicated product naming a viscosity of at least 250 cot. (25 dog. C): (i) Removable head packaging;</li> <li>Manufactured product that requires stirring before use and having a viscosity of at least 20 cSt (25 dog. C): (i) Removable head packaging;</li> <li>(ii) Cans with friction closures and (iii) low pressure tubes and cartridges may be used.</li> <li>Where combination packages are used, and the inner packages are of glass, there must be sufficient inert cushioning material in contact with inner and outer packages</li> <li>In addition, where inner packagings are glass and contain liquids of packing group I there must be sufficient inert absorbent to absorb any spillage, unless the outer packaging is a close fitting moulded plastic box and the substances are not incompatible with the plastic.</li> </ul> |
| Storage incompatibility       | <ul> <li>Avoid reaction with oxidising agents</li> <li>Avoid strong acids, acid chlorides, acid anhydrides and chloroformates.</li> </ul>  |

### SECTION 8 EXPOSURE CONTROLS / PERSONAL PROTECTION

### **Control parameters**

### OCCUPATIONAL EXPOSURE LIMITS (OEL)

## INGREDIENT DATA

| Source                       | Ingredient     | Material name    | TWA                    | STEL                   | Peak             | Notes   |
|------------------------------|----------------|------------------|------------------------|------------------------|------------------|---|
| Australia Exposure Standards | methyl acetate | Methyl acetate   | 200 ppm / 606<br>mg/m3 | 757 mg/m3 /<br>250 ppm | Not<br>Available | Not Available   |
| Australia Exposure Standards | glycerol       | Glycerin<br>mist | 10 mg/m3               | Not Available          | Not<br>Available | (a) This value is for inhalable dust containing no<br>asbestos and < 1% crystalline silica. |

EMERGENCY LIMITS

| Ingredient                           | Material name  |                | TEEL-1   | TEEL-2    | TEEL-3      |
|--------------------------------------|--|----------------|----------|-----------|-------------|
| methyl acetate                       | Methyl acetate   | Methyl acetate |          | 1,700 ppm | 10000 ppm   |
| diethylene glycol monobutyl<br>ether | Butoxyethoxy)ethanol, 2-(2-; (Diethylene glycol monobutyl ether) |                | 30 ppm   | 33 ppm    | 200 ppm     |

| diethylene glycol monobutyl<br>ether | Not Available Not Availa   |                | ble      |           |             |
| glycerol                             | Not Available Not Available                                      |                | ble      |           |             |

OCCUPATIONAL EXPOSURE BANDING

| Ingredient                           | Occupational Exposure Band Rating Occupational Exposure Band Limit   |  |  |  |  |
|--------------------------------------|--|--|--|--|--|
| diethylene glycol monobutyl<br>ether | E ≤ 0.1 ppm  |  |  |  |  |
| Notes:                               | Occupational exposure banding is a process of assigning chemicals into specific categories or bands based on a chemical's potency and the adverse health outcomes associated with exposure. The output of this process is an occupational exposure band (OEB), which corresponds to a range of exposure concentrations that are expected to protect worker health. |  |  |  |  |

# MATERIAL DATA

|                         | The basic types of engineering controls are:<br>Process controls which involve changing the way a job activit<br>Enclosure and/or isolation of emission source which keeps a<br>"adds" and "removes" air in the work environment. Ventilatior<br>ventilation system must match the particular process and che<br>Employers may need to use multiple types of controls to prev<br>For flammable liquids and flammable gases, local exhaust ve<br>equipment should be explosion-resistant.<br>Air contaminants generated in the workplace possess varying   | selected hazard "physically" away from the worker and ventilation<br>can remove or dilute an air contaminant if designed properly. The<br>mical or contaminant in use.   | n that strategically<br>e design of a<br>ed. Ventilation |  |  |
|-------------------------|---|--|--|--|--|
|                         | circulating air required to effectively remove the contaminant.   |  | 1  |  |  |
|                         | Type of Contaminant:  |  | Air Speed:   |  |  |
|                         | 0.25-0.5<br>solvent, vapours, degreasing etc., evaporating from tank (in still air). (50-100<br>f/min.)   |  |  |  |  |
| controls                | aerosols, fumes from pouring operations, intermittent conta<br>plating acid fumes, pickling (released at low velocity into zo   | iner filling, low speed conveyer transfers, welding, spray drift, ne of active generation)   | 0.5-1 m/s<br>(100-200<br>f/min.)                         |  |  |
|                         | direct spray, spray painting in shallow booths, drum filling, o<br>generation into zone of rapid air motion)  | conveyer loading, crusher dusts, gas discharge (active   | 1-2.5 m/s<br>(200-500<br>f/min.)                         |  |  |
|                         | Within each range the appropriate value depends on:   |  |  |  |  |
|                         | Lower end of the range  | Upper end of the range   |  |  |  |
|                         | 1: Room air currents minimal or favourable to capture   | 1: Disturbing room air currents  |  |  |  |
|                         | 2: Contaminants of low toxicity or of nuisance value only.  | 2: Contaminants of high toxicity   |  |  |  |
|                         | 3: Intermittent, low production.  | 3: High production, heavy use  |  |  |  |
|                         | 4: Large hood or large air mass in motion   | 4: Small hood-local control only   |  |  |  |
|                         | with the square of distance from the extraction point (in simpl<br>accordingly, after reference to distance from the contaminatin<br>1-2 m/s (200-400 f/min.) for extraction of solvents generated  | e away from the opening of a simple extraction pipe. Velocity gen<br>e cases). Therefore the air speed at the extraction point should be<br>g source. The air velocity at the extraction fan, for example, shou<br>n a tank 2 meters distant from the extraction point. Other mechar<br>action apparatus, make it essential that theoretical air velocities a<br>r used. | e adjusted,<br>Id be a minimum of<br>nical               |  |  |
| Personal protection     |   |  |  |  |  |
| Eye and face protection | <ul> <li>Safety glasses with side shields.</li> <li>Chemical goggles.</li> <li>Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation - lens should be removed in a clean environment only after workers have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 59], [AS/NZS 1336 or national equivalent]</li> </ul>   |  |  |  |  |
| Skin protection         | See Hand protection below   |  |  |  |  |
| Hands/feet protection   | <ul> <li>See Hand protection below</li> <li>Wear chemical protective gloves, e.g. PVC.</li> <li>Wear safety footwear or safety gumboots, e.g. Rubber</li> <li>The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.</li> <li>The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice.</li> <li>Personal hygiene is a key element of effective hand care. Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Application of a non-perfumed moisturiser is recommended.</li> <li>Suitability and durability of glove type is dependent on usage. Important factors in the selection of gloves include:         <ul> <li>requency and duration of contact,</li> <li>chemical resistance of glove material,</li> <li>glove thickness and</li> <li>deve trity</li> </ul> </li> <li>Select gloves tested to a relevant standard (e.g. Europe EN 374, US F739, AS/NZS 2161.1 or national equivalent).</li> <li>When prolonged or frequently repeated contact may occur, a glove with a protection class of 5 or higher (breakthrough time greater than 240 minutes according to EN 374, AS/NZS 2161.10 or national equivalent) is recommended.</li> <li>When only brief contact is expected, a glove with a protection class of 3 or higher (breakthrough time greater than 60 minutes according to EN 374, AS/NZS 2161.10 or national equivalent) is recommended.</li> <li>Some glove polymer types are less affected by movement and this should be taken into account when considering gloves for long-term use.</li> <li>Contaminated gloves should be</li></ul> |  |  |  |  |

|                  | Glove thickness may also vary depending on the glove manufacturer, the glove type and the glove model. Therefore, the manufacturers' technical data should always be taken into account to ensure selection of the most appropriate glove for the task.<br>Note: Depending on the activity being conducted, gloves of varying thickness may be required for specific tasks. For example:  |
|------------------|---|
| Body protection  | See Other protection below  |
| Other protection | <ul> <li>Overalls.</li> <li>PVC Apron.</li> <li>PVC protective suit may be required if exposure severe.</li> <li>Eyewash unit.</li> <li>Ensure there is ready access to a safety shower.</li> <li>Some plastic personal protective equipment (PPE) (e.g. gloves, aprons, overshoes) are not recommended as they may produce static electricity.</li> <li>For large scale or continuous use wear tight-weave non-static clothing (no metallic fasteners, cuffs or pockets).</li> <li>Non sparking safety or conductive footwear should be considered. Conductive footwear describes a boot or shoe with a sole made from a conductive compound chemically bound to the bottom components, for permanent control to electrically ground the foot an shall dissipate static electricity from the body to reduce the possibility of ignition of volatile compounds. Electrical resistance must range between 0 to 500,000 ohms. Conductive shoes should be stored in lockers close to the room in which they are worn. Personnel who have been issued conductive footwear should not wear them from their place of work to their homes and return.</li> </ul> |

#### Recommended material(s)

GLOVE SELECTION INDEX

Glove selection is based on a modified presentation of the:

"Forsberg Clothing Performance Index".

The effect(s) of the following substance(s) are taken into account in the *computer*-

generated selection:

| XtraCare I | Nail | Polish | Remov |
|------------|------|--------|-------|
|            |      |        |       |

| Material         | СРІ |
|------------------|-----|
| BUTYL            | С   |
| NATURAL RUBBER   | C   |
| NATURAL+NEOPRENE | С   |
| NITRILE          | C   |
| PE/EVAL/PE       | С   |
| PVA              | C   |

#### \* CPI - Chemwatch Performance Index

A: Best Selection

B: Satisfactory; may degrade after 4 hours continuous immersion

C: Poor to Dangerous Choice for other than short term immersion

**NOTE:** As a series of factors will influence the actual performance of the glove, a final selection must be based on detailed observation. -

\* Where the glove is to be used on a short term, casual or infrequent basis, factors such as "feel" or convenience (e.g. disposability), may dictate a choice of gloves which might otherwise be unsuitable following long-term or frequent use. A qualified practitioner should be consulted.

#### **Respiratory protection**

Type AX-P Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

Where the concentration of gas/particulates in the breathing zone, approaches or exceeds the "Exposure Standard" (or ES), respiratory protection is required. Degree of protection varies with both face-piece and Class of filter; the nature of protection varies with Type of filter.

| Required Minimum<br>Protection Factor | Half-Face<br>Respirator | Full-Face<br>Respirator | Powered Air<br>Respirator   |
|---------------------------------------|-------------------------|-------------------------|-----------------------------|
| up to 10 x ES                         | AX-AUS P2               | -                       | AX-PAPR-AUS /<br>Class 1 P2 |
| up to 50 x ES                         | -                       | AX-AUS / Class<br>1 P2  | -                           |
| up to 100 x ES                        | -                       | AX-2 P2                 | AX-PAPR-2 P2 ^              |

#### ^ - Full-face

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

- Cartridge respirators should never be used for emergency ingress or in areas of unknown vapour concentrations or oxygen content.
- The wearer must be warned to leave the contaminated area immediately on detecting any odours through the respirator. The odour may indicate that the mask is not functioning properly, that the vapour concentration is too high, or that the mask is not properly fitted. Because of these limitations, only restricted use of cartridge respirators is considered appropriate.
- Cartridge performance is affected by humidity. Cartridges should be changed after 2 hr of continuous use unless it is determined that the humidity is less than 75%, in which case, cartridges can be used for 4 hr. Used cartridges should be discarded daily, regardless of the length of time used

### SECTION 9 PHYSICAL AND CHEMICAL PROPERTIES

#### Information on basic physical and chemical properties

| Appearance                                      | Red highly flammable liquid with fragrance odour; mixes with water. |   |                |
|---|---|---|----------------|
| Physical state                                  | Liquid  | Relative density (Water = 1)            | 0.91           |

# SECTION 10 STABILITY AND REACTIVITY

| Reactivity                          | See section 7  |
|-------------------------------------|--|
| Chemical stability                  | <ul> <li>Unstable in the presence of incompatible materials.</li> <li>Product is considered stable.</li> <li>Hazardous polymerisation will not occur.</li> </ul> |
| Possibility of hazardous reactions  | See section 7  |
| Conditions to avoid                 | See section 7  |
| Incompatible materials              | See section 7  |
| Hazardous decomposition<br>products | See section 5  |

# SECTION 11 TOXICOLOGICAL INFORMATION

# Information on toxicological effects

|   | Inhalation of vapours may cause drowsiness and dizziness. T<br>coordination and vertigo.  | his may be accompanied by narcosis, reduced alertness, loss of reflexes, lack of  |  |  |
|---|---|---|--|--|
| Inhaled   | Inhalation of vapours or aerosols (mists, fumes), generated by the material during the course of normal handling, may be damaging to the health   |   |  |  |
|   | of the individual.<br>Acute effects from inhalation of high concentrations of vapour<br>depression - characterised by headache and dizziness, increa  | r are pulmonary irritation, including coughing, with nausea; central nervous system ased reaction time, fatigue and loss of co-ordination   |  |  |
| Ingestion   | At sufficiently high doses the material may be nephrotoxic (i.e   | e. poisonous to the kidney).  |  |  |
| Skin Contact  | Repeated exposure may cause skin cracking, flaking or drying following normal handling and use.<br>Open cuts, abraded or irritated skin should not be exposed to this material<br>Entry into the blood-stream through, for example, cuts, abrasions, puncture wounds or lesions, may produce systemic injury with harmful effects.<br>Examine the skin prior to the use of the material and ensure that any external damage is suitably protected.  |   |  |  |
| Eye   | Evidence exists, or practical experience predicts, that the material may cause eye irritation in a substantial number of individuals and/or may produce significant ocular lesions which are present twenty-four hours or more after instillation into the eye(s) of experimental animals. Repeated or prolonged eye contact may cause inflammation characterised by a temporary redness (similar to windburn) of the conjunctivita; temporary impairment of vision and/or other transient eye damage/ulceration may occur.   |   |  |  |
|   | Prolonged or repeated skin contact may cause drying with cracking, irritation and possible dermatitis following.<br>Limited evidence suggests that repeated or long-term occupational exposure may produce cumulative health effects involving organs or biochemical systems.<br>Studies with some glycol ethers (principally the monoethylene glycols) and their esters indicate reproductive changes, testicular atrophy, infertility and kidney function changes. The metabolic acetic acid derivatives of glycol ethers (alkoxyacetic acids), not the ether itself, have been found to be the proximal reproductive toxin in animals. The potency of these metabolites decreases significantly as the chain length of the ether increases.<br>Consequently glycol ethers with longer substituents (e.g diethylene glycols, triethylene glycols) have not generally been associated with reproductive effects. One of the most sensitive indicators of toxic effects observed from many of the glycol ethers is an increase in the erythrocytic osmotic fragility in rats Which produces haemolytic anaemia). This appears to be related to the development of haemoglobinuria (blood in the urine) at higher exposure levels or as a result of chronic exposure.<br>Glycol ethers based on propylene oxides, propylene glycol ethers, dipropylene glycol ethers and tripropylene glycol ethers are mainly available, commercially, as alpha-isomers (because of thermodynamic considerations); these are incapable of forming alkoxyacetic or alkoxypropionic acids as metabolites and therefore do not produce erythrocyte fragility unless contaminated by ethylene glycol ethers or to a significant degree by the beta-isomer . beta-lsomers are able to form the alkoxypropionic acids and these are linked to teratogenic effects (and possibly haemolytic effects) |   |  |  |
| Chronic   | erythrocytic osmotic fragility in rats Which produces haemolyl<br>(blood in the urine) at higher exposure levels or as a result of<br>Glycol ethers based on propylene oxides, propylene glycol et<br>commercially, as alpha-isomers (because of thermodynamic<br>acids as metabolites and therefore do not produce erythrocyt  | xic effects observed from many of the glycol ethers is an increase in the<br>ic anaemia). | METHYL ACETATE                       | For methyl acetals Acute toxicity: Methyl acetals is a water soluble substance with high volatility. The substance has narcoic properties if inhaled at concentrations of 34 mg1 (mice) and 56 mg1 (cats) with a short during in arimals and humans, absorption via the oral norule is demonstrated. After absorption the substance undergoes hydrolysis to methanol and acete acid. From the available in wito data in two be anticipated that the half-life of methyl acetate in blood ranges between 2 and 4 hours. Immediately after stopping a 6-hour inhaliation apposers to rate 2,000 ppm (6A04 mg/m3) blood concentrations below the limit of quantification (liess than 4.6 mg1) were determined inducing radio thydrolysis and mg/m be autostance. It appears from these availability of 1 admonstrated of a lower tertahydrolistic contert in low. Therefore interspectes differences in the methanol groups opmager with rate because of a lower tertahydrolistic contert in low. Therefore interspectes differences in the methanol groups opmager with rate because of a lower tertahydrolistic contert in low. Therefore interspectes differences in the methanol groups output to available animal toxicology data indicates that methyl acetate is of low acute toxicity (rats LDSO cail 6.482 mg/kg bw, dormat - 2,000 mg/kg bw. LCSO inhalities - 48 mg1 and for casts with 65 mg1 inhaled. In humans, accelerati inhalistion of vapours of methyl acetate in and and in acids the odorma. erythema with maximum grade 1 reversible with displaced that prove to cause of wive ak skin this 65 mg1 inhaled. In humans, accelerati human or animal date are available. Methyl acetate is not substance expounds to maximum and a first healting on a cause and in pact stanse expounds. Exposure to the variable in maximum and an aceta acid and in rabbits (no downa, erythema with maximum grade 1 reversible with displaced to reversite the maximum and and aceta acid and in rabbits (no downa, erythema with maximum grade 1 reversible with displaced to reversite the maximum and anone acid acid  |
| DIETHYLENE GLYCOL<br>MONOBUTYL ETHER | The material may produce severe irritation to the eye causing pronounced inflammation. Repeated or prolonged exposure to irritants may produce conjunctivitis.<br>For diethylene glycol monoalkyl ethers and their acetates:<br>This category includes diethylene glycol ethyl ether (DGEE), diethylene glycol propyl ether (DGPE) diethylene glycol butyl ether (DGBE) and diethylene glycol hexyl ether (DGHE) and their acetates.<br><b>Acute toxicity</b> : There are adequate oral, inhalation and/or dermal toxicity studies on the category members. Oral LD50 values in rats for all category members are all > 3000 mg/kg bw, with values generally decreasing with increasing molecular weight. Four to eight hour acute inhalation toxicity studies were conducted for all category members except DGPE in rats at the highest vapour concentrations achievable. No lethality was observed for any of these materials under these conditions. Dermal LD50 values in rabbits range from 2000 mg/kg bw (DGHE) to 15000 mg/kg bw (DGEA). Signs of acute toxicity in rodents are consistent with non-specific CNS depression typical of organic solvents in general. All category members are slightly irritating to skin and slightly to moderately irritating to eyes (with the exception of DGHE, which is highly irritating to eyes). Sensitisation tests with DGEE, DGEA, DGPE, DGBEA and DGBEA in animals and/or humans were negative.<br><b>Repeat dose toxicity</b> : Valid oral studies conducted using DGEE, DGPE, DGBEA, DGHE and the supporting chemical DGBE ranged in duration from 30 days to 2 years. Effects predominantly included kidney and liver toxicity, absolute and/or relative changes in organ weights, and some changes in haematological parameters. All effects were seen at doses greater than 800-1000 mg/kg bw/day from oral or dermal studies; no systemic effects were observed in inhalation studies with less than continuous exposure regimens.<br><b>Mutagenicity</b> : DGEE, DGEEA, DGBE, And DGHE generally tested negative for mutagenicity in <i>S. typhimurium</i> strains TA98, TA100, TA1535, TA1537 and TA1538 |

|                                      | ethers are not likely to be genotoxic.<br><b>Reproductive and developmental toxicity:</b> Reliable<br>highest oral doses tested (4,400 mg/kg/day for DGEE<br>reproductive toxicity in rats administered DGBE also w<br>noted in F1 mice treated with 4,400 mg/kg/day DGEE<br>the testes and fertility were not affected. | Australia Exposure Standards  | IMO IBC Code Chapter 17: Summary of minimum requirements                                |  |
| Australia Inventory of Chemical Substances (AICS)   | IMO IBC Code Chapter 18: List of products to which the Code does not apply              |  |
| GESAMP/EHS Composite List - GESAMP Hazard Profiles  | IMO MARPOL 73/78 (Annex II) - List of Other Liquid Substances                           |  |
|   |   |  |
| National Inventory Status   |   |  |
|   |   |  |

| National Inventory            | Status   |  |
|-------------------------------|--|--|
| Australia - AICS              | Yes  |  |
| Canada - DSL                  | Yes  |  |
| Canada - NDSL                 | No (diethylene glycol monobutyl ether; glycerol; methyl acetate) |  |
| China - IECSC                 | Yes  |  |
| Europe - EINEC / ELINCS / NLP | Yes  |  |

| Japan - ENCS        | Yes  |
|---------------------|--|
| Korea - KECI        | Yes  |
| New Zealand - NZIoC | Yes  |
| Philippines - PICCS | Yes  |
| USA - TSCA          | Yes  |
| Taiwan - TCSI       | Yes  |
| Mexico - INSQ       | Yes  |
| Vietnam - NCI       | Yes  |
| Russia - ARIPS      | Yes  |
| Legend:             | Yes = All CAS declared ingredients are on the inventory<br>No = One or more of the CAS listed ingredients are not on the inventory and are not exempt from listing(see specific ingredients in brackets) |

### **SECTION 16 OTHER INFORMATION**

| Revision Date | 04/02/2020 |
|---------------|------------|
| Initial Date  | 04/02/2020 |

#### SDS Version Summary

| Version | Issue Date | Sections Updated  |
|---------|------------|---|
| 2.1.1.1 | 04/02/2020 | Acute Health (inhaled), Acute Health (skin), Acute Health (swallowed), Classification |

#### Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.

#### Definitions and abbreviations

PC – TWA: Permissible Concentration-Time Weighted Average PC – STEL: Permissible Concentration-Short Term Exposure Limit IARC: International Agency for Research on Cancer ACGIH: American Conference of Governmental Industrial Hygienists STEL: Short Term Exposure Limit TEEL: Temporary Emergency Exposure Limit<sub>o</sub> IDLH: Immediately Dangerous to Life or Health Concentrations OSF: Odour Safety Factor NOAEL: No Observed Adverse Effect Level LOAEL: Lowest Observed Adverse Effect Level TLV: Threshold Limit Value LOD: Limit Of Detection OTV: Odour Threshold Value BCF: BioConcentration Factors BEI: Biological Exposure Index
